

Installing Root Certificates on Chromebooks

1. Download the root certificate from https://ssl.lmtd.org/ssl_cert on the Chromebook or copy it to your Google Drive account
2. Open the Chrome browser and type **chrome://settings/certificates** into the address bar.

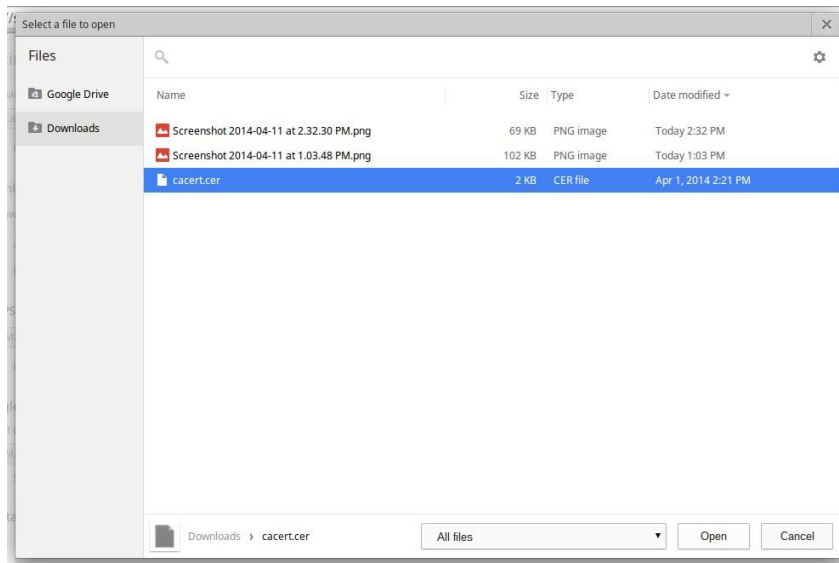

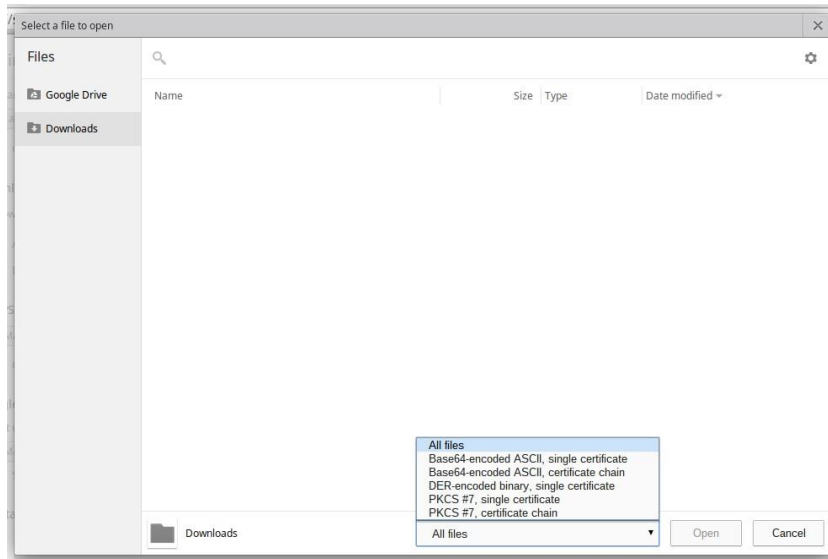

3. Inside the **Certificate Manager** go to the **Authorities** tab and click on the "Import..." button at the bottom of the manager.

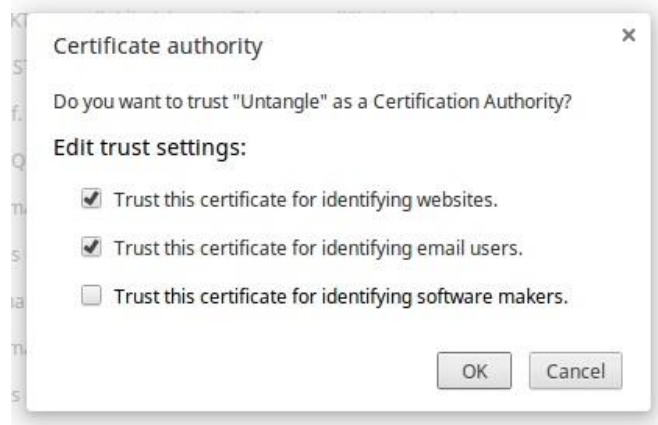

4. Select **Google Drive** or **Downloads** to find the certificate file.

IMPORTANT: If the file does not show up in either list change the file type filter at the bottom of the page to "All files" and search again.

5. Select the certificate file and click on the **Open** button.

6. Check the options to "**Trust this certificate for identifying websites**" and "**Trust this certificate for identifying email users**".

7. Click the **OK** button.
